FINAL

Supplemental Remedial Investigation for Line 6 at Installation Restoration Program Operable Unit 11, Iowa Army Ammunition Plant, Middletown, Iowa

Contract No. W912QR21D0019
Delivery Order W912QR21F0421

Prepared for

U.S. Army Corps of Engineers
Louisville District

600 Dr. Martin Luther King Jr. Place
Louisville, Kentucky 40202-2232

February 2024

1. Introduction

This supplemental remedial investigation (SRI) document presents the results of SRI activities for groundwater at the Line 6 Ammo Production Area (19105.1068; IAAP-007G) under Operable Unit 11 (OU-11). The Line 6 Ammo Production Area is an approximately 95.2-acre area located in the north-central portion of the Iowa Army Ammunition Plant (IAAAP), in Middletown, Iowa as seen in Figure 1. The IAAAP has been placed under the U.S. Department of Defense Installation Restoration Program (IRP), which follows the process under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) as amended by the Superfund Amendments and Reauthorization Act. This work was conducted under U.S. Army Corps of Engineers, Louisville District (USACE), Contract W912QR21D0019, Delivery Order W912QR21F0421.

A remedial investigation (RI) report for OU-11 was completed in August 2021 (CH2M, 2021). The OU-11 grouping includes miscellaneous environmental sites that have been determined to have limited or no environmental impacts based on previous investigations and historical data. The OU-11 RI report evaluated the conceptual site models and analytical data for 20 environmental sites and concluded that either there was no evidence of a site release, or site-related chemicals in media did not pose potentially unacceptable noncarcinogenic hazards or carcinogenic risks at any of the sites, with one exception. The human health risk assessment (HHRA) performed in conjunction with the 2021 RI identified potentially unacceptable risks for exposure to historical concentrations of manganese in groundwater at Line 6. However, the 2021 RI report used legacy data from 2005 to 2006, and there was uncertainty as to whether concentrations could be naturally occurring. Therefore, it was recommended that further investigation be conducted at Line 6 to verify that manganese in groundwater is naturally occurring and not site related. To satisfy this data gap, additional data were collected at Line 6 in 2022 and 2023, as summarized in this report.

This document has been prepared to address the data gap presented in the *Uniform Federal Policy–Quality Assurance Project Plan Addendum for Remedial Investigation at Contaminated Waste Processor, Line 3A Sewage Treatment Plant/Drying Beds, and Line 6 Ammo Production (Detonator) Groundwater, Iowa Army Ammunition Plant, Middletown, Iowa* (2022 QAPP addendum) (Jacobs, 2022). The 2022 QAPP addendum identified a need to verify whether the manganese concentrations in groundwater were naturally occurring. This document summarizes the conclusions of these SRI activities and provides recommendations for the site going forward, consistent with the U.S. Environmental Protection Agency's (USEPA's) *Guidance on Conducting Remedial Investigations and Feasibility Studies under CERCLA* (USEPA 1988).

1.1 Installation Description

The IAAAP consists of 19,011 acres adjacent to Middletown, in Des Moines County, Iowa. It is approximately 8 miles west of Burlington. The installation is bordered by Highway 34 to the north, upland agricultural farms to the east and west, and the Skunk River valley to the south (Figure 1).

The IAAAP is an active Joint Munitions Command facility currently operated by civilian contractor American Ordnance, LLC. The current mission of the IAAAP is to load, assemble, and pack ammunition items, including projectiles, mortar rounds, warheads, demolition charges, and munitions components such as fuzes, primers, and boosters. Approximately one third of the IAAAP property is occupied by active or formerly active production or storage facilities. The IAAAP consists of production lines, landfills, disposal areas, burn areas, a demolition area, and a fire training area. The remaining land is either woodlands or property leased for agricultural usage.

Due to explosives-contaminated surface water leaving the installation boundaries, the IAAAP was added to the National Priorities List in August 1990. In September 1990, a Federal Facility Agreement (FFA) was signed by USEPA Region 7 and the U.S. Army; it became effective in December 1990. The 1990 FFA identified 30 Resource Conservation and Recovery Act (RCRA) solid waste management units (SWMUs) at the facility. The 2018 RCRA Permit (USEPA, 2018) stated that the SWMUs listed in the 1990 FFA were being integrated into the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA) sites; the integration plan is currently being developed. Through the FFA, the U.S. Army works with USEPA, with support provided by Iowa Department of Natural Resources. The Headquarters Army Environmental System (HQAES) includes 75 IRP sites at the IAAAP.

1.2 IAAP-007G_Line 6 Ammo Production (Detonator) Groundwater (19105.1068) Description and Operational History

The Line 6 Ammo Production Area includes four HQAES database sites (Detonator site, IAAP-007 and IAAP-007G; Inside Blast Radius site, IAAP-002-R-01; and Outside Blast Radius site, IAAP-002-R-02). These sites will collectively be referred to as Line 6 throughout this document. Of these four environmental sites, only one falls under OU-11 (Line 6 Ammo Production ([Detonator] Groundwater). The HQAES identification for this site is 19105.1068 and the Army Environmental Database identification is IAAP-007G. Details for the other HQAES database sites in the Line 6 Ammo Production Area are provided in the OU-11 RI report (CH2M, 2021).

Line 6 is in the north-central portion of the IAAAP facility, within the Brush Creek watershed, as shown on Figure 2. It encompasses approximately 95.2 acres that historically included 34 buildings and 97 structures, most of which have been demolished (Figure 3). Line 6 is bounded by Line 9 to the south and agricultural lands and vegetated drainage ditches to the north, south, east, and west.

Operations at Line 6 began in 1941 with the production, storage, and shipping of detonators, delays, and relays. These operations were temporarily ceased between 1945 and 1949 to prepare for extended storage, during which time buildings, equipment, and sumps were cleaned, and some wooden structures were burned. Prior to 1960, mercury fulminate was used for site operations at Buildings 6-91, 6-89, and 6-90. Between 1956 and 1963, Line 6 operated only sporadically for special production contracts (TN & Associates, 2003). Following this period, Line 6 produced primers, detonators, and rocket igniters until the late 1960s, when the focus of production shifted to a combination of detonators, grenade fuses, and mines.

During the 1980s, a range of munitions was produced. A black powder–destroying facility was installed to desensitize black powder using a water-soaking method (JAYCOR, 1996; TN & Associates, 2003). When Building 6-68 was operational, it contained 20 RCRA-permitted aboveground tanks that were used for the treatment of waste black powder. Outside of the building, two in-ground tanks were used for the treatment of supernatant liquids generated during the treatment of waste black powder. Wastewater from the black powder–desensitizing process flowed from the operation areas through stainless steel troughs to treatment sumps. The treated water was emptied into limestone gravel filter beds (also referred to as seepage pits), allowing the desensitized wastewater to percolate into the surrounding soil. To avoid overflow out of the filter beds, surface drainage ditches were created to direct the water leaving the filter beds into an intermittent tributary of Brush Creek (JAYCOR, 1996). A National Pollutant Discharge Elimination System permit once existed for these desensitized wastes from the Line 6 area (TN & Associates, 2003).

Production had decreased at Line 6 in the late 1980s. By 1992, operations had ended, and the building floors, equipment, and sumps were cleaned. Line 6 remains in extended storage (TN & Associates, 2003). All buildings at Line 6 have been demolished, and no wastewater is generated.

1.3 Environmental Setting

Topography at Line 6 is relatively flat, sloping in a general south-southeasterly direction. Surface drainage is provided by a series of ditches that flow southward into an intermittent tributary of Brush Creek (Figure 2). Line 6 is primarily underlain by stiff/dense clayey glacial till and occasional occurrences of loess (overburden), and interbedded limestone and shale (bedrock), as shown on Figure 4 (T-30/T-29 are within Line 6). Where the loess is present, it forms the surface layer overlying the till to depths ranging from 8 to 17 feet and consists of medium to stiff silty clay with a trace of sand grading upward to a clayey silty loam at the surface. The glacial till, which is more prominent at the Line 6, consists of medium to hard (generally stiff to very stiff) sandy silty clay with occasional interspersed sand seams (TN & Associates 2003). The depth of the till is estimated at 88 feet and greater (TN & Associates, 2003).

The depth to groundwater at the site ranges from approximately 4 to 25 feet below ground surface in overburden and 25 to 48 feet below ground surface in the bedrock, based on gauging data collected in 2015. Groundwater in both the overburden and bedrock flows generally to the south (Figures 5 and 6); refer to Figure 7 for a localized potentiometric surface figure of the Line 6 shallow overburden groundwater (data collected in May 2017). The horizontal hydraulic gradient is estimated on average to be 0.005 foot per foot. Groundwater elevation data at monitoring well clusters indicate that the vertical groundwater gradient has a downward flow. The hydraulic conductivity in the aquifer is relatively low, ranging from 8.1×10^{-6} to 4.5×10^{-4} centimeters per second (cm/s) in the overburden and 3.5×10^{-6} to 8.5×10^{-5} cm/s in the bedrock (Tetra, Tech 2012).

1.4 Summary of RI for Line 6

Line 6 has been under environmental investigation since 1985 and was most recently evaluated under OU-11. The final RI report for OU-11 (CH2M, 2021) includes a summary of all the previous investigations and actions at Line 6.

As part of the OU-11 RI, the most recent groundwater data available for Line 6 were evaluated; this included data from 2005 and 2006. During the 2005/2006 sampling events, manganese was detected in groundwater at three monitoring wells (T-12, T-19, and T-31) above its site characterization project action limit (PAL), which was 430 micrograms per liter (µg/L) at the time of the report, and its groundwater background threshold value (BTV) of 580 µg/L (Figure 8). The MCL is used for the PAL; however, when no MCL is available, the greater of the health advisory level (HAL) and regional screening level (RSL) is used. The RSLs were revised in May 2023, and the latest value for manganese is 43 µg/L (based on a hazard quotient of 0.1). Since there is no MCL for manganese, the HAL of 300 µg/L must be used for the PAL as of May 2023.

Monitoring well T-12 is along the upgradient site boundary; T-19 is downgradient of former Building 6-68, in the southeast area of the site; and T-31 is downgradient of former Building 6-91, in the southwest area of the site. Total manganese concentrations during the prior groundwater sampling events (October 1992 and 1993) at these three wells were an order of magnitude lower than the 2005–2006 concentrations, which indicates that the elevated concentrations may have been temporal and not associated with a historical site release. Prior to 2005–2006, manganese exceedances occurred in wells on the eastern side of Line 6 (T-12, T-17, and T-20): T-12 is along the upgradient site boundary; T-17 is adjacent to former buildings 6-35, 6-11, and 6-69-6; and T-20 is south/downgradient of former building 6-68. Even though the exceedances occurred on the eastern side of Line 6, manganese concentrations in well clusters adjacent to these wells did not exceed the PAL or BTV. Refer to Table 3 for a historical concentration data comparison.

The HHRA that was conducted under the OU-11 RI concluded that there were potentially unacceptable risks for future hypothetical residents from exposure to manganese in groundwater at Line 6. However, elevated manganese concentrations in groundwater are considered to be associated with temporary, localized geochemical conditions rather than a site release. This was based on several lines of evidence:

- Manganese was not associated with historical site operations and was not identified as a chemical of concern (COC) in soil at Line 6 (USACE and Dawson Solutions, 2021).
- The distribution of manganese concentrations in groundwater in 2005–2006 were not indicative of a site-related release. That is, elevated concentrations are present in various unrelated areas of Site 6, including an upgradient well (T-12; well locations and historical data are shown on Figure 8).
- There were also no manganese exceedances in wells (T-10 and T-22) located next to wells with exceedances (T-12, T-19, and T-31).
- Manganese concentrations in groundwater samples that were collected when the site was operational in the 1990s were comparable to or less than the groundwater BTV of 580 µg/L, further indicating that a release did not occur as part of site operations.

The OU-11 RI report recommended further investigation at Line 6 to verify that manganese in groundwater is naturally occurring and is not site-related.

1.5 Objectives of the SRI

The objective of the SRI is to evaluate manganese concentrations in Line 6 groundwater, assess whether it is naturally occurring, and if not to delineate the extent of the elevated manganese concentrations. Based on the results of the SRI, the following decisions will be made, as documented in the 2022 QAPP addendum:

- Are manganese concentrations in groundwater below the BTV for IAAAP, or are concentrations statistically similar to background concentrations at IAAAP?
  - If current manganese concentrations in groundwater at Line 6 are less than the BTV or statistically similar to background, then no action for groundwater at Line 6 will be warranted.
  - If current manganese concentrations in groundwater at Line 6 are greater than the BTV and not statistically similar to background, then the HHRA for Line 6 groundwater will be updated.
- Do current manganese concentrations in groundwater pose potentially unacceptable risk to human health (that is, do risks exceed an excess lifetime cancer risk of 1×10^{-4} or a noncancer hazard quotient of 1)?
  - If the HHRA concludes that there are no unacceptable risks or hazards, then no action for groundwater at Line 6 will be warranted.
  - If the HHRA concludes that there are potentially unacceptable risks or hazards, then a feasibility study for groundwater will be recommended.

This SRI will determine the recommendation for groundwater at Line 6.

2. SRI Field Activities

This section describes the methodology of the field investigation activities conducted as part of the SRI for Line 6. The rationale for the SRI was detailed in the QAPP addendum (CH2M, 2021); wells were selected for sampling based on manganese concentrations in exceedance of the PAL and BTV. The groundwater PALs identified in the QAPP addendum are based on the maximum contaminant level (MCL); if no MCL is

available, the greater of the HAL and the tap water RSL will be used. There is no primary MCL value for manganese. Therefore, the noncarcinogenic lifetime HAL of 300 µg/L was identified as the PAL (CH2M, 2021). The BTV for manganese in groundwater at IAAAP is 580 µg/L (CH2M, 2020a).

The field activities conducted during this SRI consisted of the following activities:

- August 2022: redevelopment and groundwater sampling of six existing monitoring wells (T-12, T-17, T-18, T-19, T-20, and T-31) with historical manganese concentrations in exceedance of the PAL and BTV.
- January 2023: redevelopment and groundwater sampling of one existing monitoring well (T-21) as part of a contingency sampling event.
  - The 2022 QAPP addendum stated that if current manganese concentrations exceeded both the PAL and BTV at one of the six proposed wells, then existing clustered wells immediately adjacent to the well with the exceedance would be sampled to refine the current vertical extent of manganese above and/or below the screened interval with the exceedance.
  - Of the six proposed wells, only T-20 exceeded both the PAL and BTV, triggering the contingency sampling at an adjacent well.
- August 2022 through May 2023: decontamination and waste management.
- Data management.

Field activities were conducted in accordance with the 2022 QAPP addendum. Appendix A contains field documentation, and Appendix B includes laboratory reports and the data quality evaluation.

2.1 Monitoring Well Development

Given the number of years since existing wells at Line 6 had been sampled, existing wells were redeveloped prior to sampling to remove sediments that may have settled in the wells over time. These sediments can increase sample turbidity and elevate concentrations. As documented in the 2022 QAPP addendum (SOP-01), the target turbidity for the well development was 25 or fewer nephelometric turbidity units (NTUs).

Jacobs geologists and Roberts Environmental Drilling field crews mobilized to IAAAP on August 15, 2022. Roberts Environmental Drilling began redevelopment of existing wells on August 19, 2022, using a surge block and submersible pump (Monsoon pump with a 130-feet lead and tubing placed approximately 2 feet above the well bottom). Each well received several aggressive surges between purges. Monitoring wells T-17, T-19, T-20, and T-31 were able to achieve target turbidity values ranging from 8.7 to 17.6 NTUs. Due to slow recharge rates, monitoring wells T-12, T-18, and T-31 required several days of surging, purging, and recharging before development was completed. Monitoring wells T-12 and T-18 were developed for three consecutive days, two times per day; each well was purged until dry (each well was purged until the pump automatically shutoff due to absence of water). The final turbidity values for these locations remained elevated: T-12 had a final turbidity value of 78.6 NTUs after seven well volumes were purged; and T-18 had fluctuating turbidity values during the final development that ranged from 130 to 344 NTUs after five well volumes were purged. (Refer to Appendix A for field forms including well development logs.) All wells were allowed to equilibrate for at least 24 hours after development before low-flow groundwater sample collection.

Monitoring well T-21 was redeveloped and sampled during a subsequent mobilization, January 9–11, 2023. The redevelopment of T-21 required multiple surges, purges, and recharges, and it never reached target turbidity values after 11 well volumes were purged. Turbidity values collected during the final purge

were over the instrument range of 1,000 NTUs. T-21 was allowed to equilibrate and recharge for 46 hours prior to sampling; Table 1 and Appendix A provide additional details. These monitoring wells are shown on Figure 3.

2.2 Low-flow Groundwater Sampling

Groundwater samples were collected from seven monitoring wells during the two mobilizations, using low-flow purge and sample techniques (Table 1). Peristaltic pumps were used at wells with static shallow groundwater (top of groundwater measured at 15 feet below top of casing or less during the depth to water survey); submersible bladder pumps were used at monitoring wells with static groundwater deeper than 15 feet below top of casing. The bladder pump malfunctioned during the sampling of T-12, so a variable speed Mini-Monsoon pump was used to low-flow sample this location.

Groundwater quality parameters (pH, specific conductance, turbidity, dissolved oxygen, temperature, salinity, and oxidation-reduction potential) were collected using a water quality meter and were recorded on purge logs. Groundwater quality parameters were allowed to stabilize for three consecutive readings before each well was sampled. Refer to Appendix A for field documentation, including purge logs.

Groundwater samples were collected for manganese analysis in laboratory-prepared sampling containers that were pre-preserved with nitric acid (based on the SW-846 Method 6020A analytical requirement for metals analysis); the dissolved manganese samples were field-filtered using a one-time-use 0.45-micron filter. Samples were packaged in coolers on ice and shipped via FedEx overnight to Eurofins Denver.

2.3 Decontamination and Investigation-derived Waste Management

Decontamination and waste management activities were conducted in accordance with the final basewide environmental and waste management plan (CH2M, 2018). Investigation-derived waste (IDW) generated during the RI included well development and purge water, and decontamination fluids used to decontaminate nondisposable sampling equipment. New, United Nations–approved 55-gallon steel drums were used to contain waste generated during the field activities.

Groundwater generated during well development and groundwater sampling was temporarily stored in labeled drums or portable tanks. Downhole and nondisposable sampling equipment was decontaminated immediately after each use, which generated decontamination water. Groundwater and decontamination water were disposed of at the onsite Inert Disposal Area (IDA) groundwater treatment facility with approval from IAAAP.

PPE, tubing, and disposable sampling materials were consolidated in an IDW drum and temporarily stored at the installation-approved staging location, the IDA, and properly labeled. Based on the analytical results and in accordance with 40 CFR Part 261 Subpart C, this IDW was classified as nonhazardous. The waste was removed by Green Rock on May 11, 2023, and delivered to the Valicor Environmental Services disposal facility in Monroe, Ohio.

2.4 Data Management and Evaluation

2.4.1 Data Tracking

Data management and tracking were conducted from the time of field collection to receipt of validated electronic analytical results. Field samples and their corresponding analytical tests were recorded on the chain-of-custody forms submitted with the samples to the laboratory. Chain-of-custody entries were checked against the site-specific project instructions and work plans to verify that the designated field

samples had been collected and submitted for the appropriate analysis. Upon receipt of the samples by the laboratory, a comparison to the field information was conducted to verify that each sample was analyzed for the correct parameters and that appropriate quality assurance/quality control samples were collected.

2.4.2 Data Quality Evaluation

Jacobs performed a data review and verification as described in the UFP-QAPP (CH2M, 2017). The data quality of analytical results from the samples collected during the field investigation was assessed. Analytical data were validated as Stage 2B level evaluations. Qualifier flags were applied to the data to reflect data usability limitations. The data review and verification efforts are documented in the data quality evaluation report (Appendix B).

The data quality evaluation concluded that the data can be used for project decisions taking into consideration the validation flags applied to the samples (detailed in Appendix B). Based on the verification effort, the data appear to accurately represent the conditions of the environmental media analyzed at the time of collection. The analytical techniques were properly performed and documented, and the laboratory procedures applicable to each method were followed and documented. Standard industry laboratory methods were used to analyze the data as prescribed in the approved UFP-QAPP (CH2M, 2017). Summary tables of the reported data, including both detections and nondetects, are included in Table 3.

2.5 Deviations

Two deviations were notable during the 2022–2023 groundwater sampling events:

- Well development took longer than expected, and achieving target turbidity values after extensive development was difficult. The wells that had issues with achieving target turbidity (T-12, T-18, and T-21) still successfully achieved well development criteria based on SOP-01, defined in the UFP-QAPP (CH2M, 2017), as these wells were purged dry multiple times.
- A malfunctioning bladder pump required the use of a Mini-Monsoon pump for one sampling location (T-12).

The minor deviations outlined above did not impact the data quality and still conformed to the field activities specified in the 2022 QAPP addendum.

3. SRI Groundwater Sampling Results

3.1 Depth-to-Groundwater Survey

Prior to low-flow purge and sampling, the wells associated with the SRI at Line 6 were gauged for depth-to-groundwater measurements. Table 1 summarizes the well details, including the depth-to-groundwater measurements and groundwater elevations at Line 6 monitoring wells included in the SRI. Due to the limited number of wells that were gauged, the varying depths of screen intervals included, and monitoring well T-12 being measured months apart from the other wells, there are not enough representative data to accurately generate a new localized potentiometric surface figure from the data collected during the SRI. However, based on the limited groundwater elevation data collected during the SRI, overburden groundwater appears to flow generally to the south; and vertical gradients between shallow and intermediate overburden, and between intermediate overburden and shallow bedrock show downward flow at clustered wells. These groundwater flow patterns are consistent with historical trends (CH2M, 2021 and Tetra Tech 2012). Depth-to-water ranges observed were between 9.19 and 22.07 feet below top of

casing in overburden; and between 31.70 feet and 52.34 feet below top of casing in shallow bedrock. These values are also consistent with historical depth-to-water ranges observed.

3.2 Groundwater Parameters

Groundwater geochemical parameters were collected prior to groundwater sample collection. The geochemical parameters are summarized in Table 2. In general, groundwater parameters observed during the SRI are indicative of aerobic conditions: dissolved oxygen concentrations were all greater than 1.00 milligrams per liter (mg/L) (concentrations ranged from 1.96 mg/L to 7.66 mg/L), and oxidation-reduction potential values were all positive (values ranged from 53.3 millivolts [mV] to 203 mV). The geochemical parameters observed in 2005/2006 were notably less aerobic and generally exhibited reducing conditions: ORP was negative at both T-19 and T-31 (-70.3 mV and -136.8 mV, respectively), and DO concentrations at T-12 and T-19 were significantly less than those observed in 2022/2023 (2.7 mg/L at T-12 and 0 at T-19).

The pH of the groundwater was generally neutral (values ranged from 6.31 to 7.41 standard units). Specific conductivity values ranged from 258 microsiemens (µS/cm) to 874 µS/cm (maximum observed at T-20) during the SRI, which is similar to the values observed in 2005–2006, when the maximum specific conductivity value was 833 µS/cm (observed at T-12).

As discussed in Section 2.1, turbidity values were variable during development; however, during low-flow sampling, six of the seven monitoring wells had final turbidity values ranging from 2.9 NTUs to 16.3 NTUs, while monitoring well T-18 reached a minimum turbidity value of 109 NTUs. (As described in Section 2.1, the turbidity in this well never decreased even after 3 days of redevelopment). Additionally, four of the sampled wells had turbidity values less than 10 NTUs, meeting the goal identified in the 2022 QAPP addendum; turbidity values at the remaining two wells were just over 10 NTUs (12.7 NTU and 16.3 NTU).

3.3 Groundwater Analytical Results

Groundwater analytical results are summarized in Table 3. Three locations (T-12, T-19, and T-31) were sampled during both the 2022–2023 SRI and the 2005–2006 groundwater sampling events. These locations are also shown in Table 3 for historical comparison. Of the seven monitoring wells redeveloped and sampled during the 2022–2023 SRI, two locations (T-20 and T-21) had manganese in groundwater at levels which exceeded both the screening criterion (HAL, which is 300 µg/L) and BTV (580 µg/L). However, both exceedances were similar to the BTV: manganese concentrations observed at T-20 were 600 µg/L for total manganese and 640 µg/L for dissolved; and at T-21, concentrations of manganese were observed at 620 µg/L total manganese and 660 µg/L dissolved manganese. These locations were not sampled during the 2005–2006 event, but concentrations of total manganese during the 2022/2023 events were similar to those observed during the 1992 event at T-20 (624 µg/L in 1992 compared to 600 µg/L in 2022) and had increased at T-21 (163 µg/L in 1992 compared to 620 µg/L in 2023). Dissolved manganese was not sampled in 1992 or 1993. Dissolved manganese does not have an established BTV; therefore, the PAL of 300 µg/L alone is used to determine an exceedance. During the 2022/2023 events, locations T-17 and T-18 had dissolved manganese concentrations exceeding the PAL; however, both locations were equal to or less than the total manganese concentrations observed at the same location and sampling event; furthermore, both locations had total manganese concentrations below the BTV. Therefore, it is assumed that the dissolved manganese observed at T-17 and T-18 are attributed to natural sources.

4. Nature and Extent of Manganese in Groundwater

Analytical data from the Line 6 SRI were compared to the human health PAL, which is the HAL for manganese (see Section 2), and the BTV to assess whether the detected concentrations were consistent with the background concentrations for metals. USEPA's (2002) *Role of Background in the CERCLA Cleanup Program* states that risk management and remedial actions for CERCLA sites should account for the influence of natural and anthropogenic background conditions, and that cleanup goals for COCs from an identified CERCLA release should not be set for levels less than their corresponding background concentrations. Background concentrations for natural and anthropogenic chemicals are also used for comparison to site data to support the identifications of a site-related release. BTVs were calculated for groundwater at IAAAP and documented in the final *Evaluation of Background Concentrations of Metals in Groundwater* (CH2M, 2020a), and the BTV established for total manganese in groundwater was 580 µg/L; a BTV for dissolved manganese has not been established.

During the SRI events, manganese (total and dissolved) was detected in all seven monitoring wells sampled. However, only two locations had manganese concentrations that exceeded the PAL (300 µg/L) and BTV (580 µg/L): intermediate overburden well T-20 and shallow bedrock well T-21, part of a clustered well pair. These wells are located at the southeast corner of Line 6 (Figure 8). The shallow overburden wells (T-19 and T-31), which are both screened from 10 to 20 feet below ground surface, contained the lowest concentrations of total and dissolved manganese. The highest concentrations of total and dissolved manganese observed during the SRI were at T-20 and T-21, which are part of a well cluster with shallow monitoring well T-19, which had the lowest concentrations of total and dissolved manganese observed during the SRI.

In general, manganese concentrations (both total and dissolved) have decreased significantly since the 2005–2006 sampling events (Table 3), when T-12, T-19, and T-31 all exceeded screening criteria and BTV. During the 2005–2006 event, total manganese at these three locations was observed at concentrations three times that of the screening criteria, and more than double the BTV. All three of these locations had manganese concentrations below screening criteria in 2022–2023; T-19 and T-31 decreased by more than an order of magnitude since 2005.

The final OU-11 RI report (CH2M, 2021) concluded that elevated concentrations in groundwater were likely associated with temporary, localized geochemical conditions rather than a site release. This was based on the distribution of manganese in groundwater, since monitoring wells with exceedances during the 2005–2006 events (T-12, T-19, and T-31) were located in different areas across the site, and there was no apparent spatial pattern or source associated with the elevated concentrations (Figure 8). Monitoring well T-12 is along the upgradient site boundary; T-19 is downgradient of former Building 6-68, in the southeast area of the site; and T-31 is downgradient of former Building 6-91, in the southwest area of the site. Total manganese concentrations prior to the 2005–2006 groundwater sampling events at these three wells were significantly lower than the 2005–2006 concentrations (Table 3). Based on the most recent SRI sampling results, concentrations of total and dissolved manganese have returned to levels similar to those that were observed prior to the 2005–2006 events, which further indicates that the elevated concentrations may have been temporal and not associated with a site release. Prior to 2005, manganese exceedances occurred in wells on the north and eastern sides of Line 6 (T-12, T-17, and T-20); however, manganese concentrations in well clusters adjacent to these wells did not exceed the PAL and BTV. In addition, there are no records of manganese being used as part of line operations and there were no soil sources identified in this area (CH2M, 2021).

5. Fate and Transport of Manganese in Groundwater

The properties of chemicals and the environment are used to understand and predict chemical fate and transport. An understanding of the fate and transport is part of the overall assessment of the potential for a chemical to cause an adverse human health or environmental effect.

5.1 Chemical Mobility and Persistence

Due to the complexity of metals and their variable forms in the environment, predicting their chemical mobility and persistence can be difficult. Typically, they are not volatile under normal temperature and pressure conditions. Their sorption potential is a complex function of pH, organic content, oxide coatings, and other factors; therefore, K_d is not easily estimated by methods other than site-specific testing (USEPA, 1996). Generally, metal adsorption increases with pH. Metals most often sorb to clay minerals, organic matter, and iron and manganese oxyhydroxides. Metals may be sorbed on the surface of the soil or fixed to the interior of the soil, where they are unavailable for release to groundwater. After available sorption sites are filled, most metals are incorporated into the structures of major mineral precipitates as coprecipitates (ERG, 2005).

The solubilities of metals are also dependent on several factors. In general, solubility is highly dependent on the oxidation state of the metal (USEPA, 2007). The solubility of cations (positively charged ions) decreases as pH increases. Some cations may complex with oxygen and hydroxide, forming insoluble oxyhydroxides, or with phosphate, sulfate, and carbonate, forming insoluble mineral precipitates. Metal sulfide complexes, which form in reducing environments, are extremely insoluble and tend to reduce the total metals concentrations (ERG, 2005).

The solid form of manganese (manganese oxides) is present in the natural soil matrix. If insufficient amounts of oxygen and nitrate are present in the subsurface, then manganese oxides will be used as electron acceptors during metabolic activity and dissolve under reducing conditions into soluble forms. Sulfides present in groundwater can also result in the dissolution of manganese hydroxides. Several metals (such as arsenic) tend to sorb to these manganese oxides. If these manganese compounds are dissolved, the metals that are bound to these hydroxides and oxides (e.g., chromium and arsenic) will also be released.

Subsurface conditions are likely to become more reduced in areas that have substantial carbon available. Several metabolic processes can use naturally occurring organic carbon or anthropogenic organic compound contamination as an electron donor or electron acceptor. Manganese concentrations and those metals that tend to desorb from manganese oxyhydroxides when they are reduced to their more soluble forms are also frequently higher in areas of organic contamination (such as explosives or volatile organic compound plumes) because of the reducing conditions that are created during biodegradation of these chemicals (USEPA, 2017).

5.2 Chemical Transport

Primary potential migration pathway for manganese in groundwater at Line 6 is advection of dissolved contaminants with groundwater flow. Manganese was not used in site operations at Line 6, and there are no soil sources near the wells with groundwater exceedances. Contaminants in the overburden aquifer can be transported through advection and dispersion. Advection is the primary transport mechanism and includes the transport of dissolved contaminants by the bulk motion of flowing groundwater. Dispersion is the spreading of dissolved contaminants from the path they would be expected to follow during advection due to the spatial variation in aquifer permeability, fluid mixing, and molecular diffusion.

Groundwater flow in the overburden aquifer is influenced by the hydrologic watersheds. At Line 6, groundwater flows in a southerly direction. Overburden aquifer groundwater can also flow downward toward the bedrock aquifer. This would be indicated by downward vertical gradients. However, contaminant migration between the aquifers would be limited due to physical differences between the surficial (overburden) geology and the primary bedrock matrix and pressure (head). Groundwater in bedrock flows primarily through secondary porosity features, like fractures. Where the bedrock crops close to the surface, groundwater flow is also influenced by the watersheds.

Contaminants typically will not move as rapidly as groundwater because of retardation, or the adsorption of the contaminant to the solid media. Retardation can be a significant factor for groundwater chemicals of potential concern (COPCs)within the overburden aquifer, which is composed primarily of clays and silts. Retardation will not be important where sand lenses are present from the glacial meltwater.

6. Risk Assessment Update

6.1 Potential Receptors and Exposure Pathways

An HHRA and an ecological risk assessment (ERA) were conducted for groundwater at Line 6 as part of the 2021 RI to evaluate potential current and future health risks and hazards from exposure to chemicals in site groundwater. The HHRA identified potentially unacceptable risks and hazards for future residential receptors exposed to manganese in groundwater. The ERA did not identify complete exposure pathways for ecological receptors; therefore, the process was terminated with the conclusion that there are no adverse effects to ecological receptors since there are no complete exposure pathways.

There are no potential receptors or potentially complete exposure pathways identified under current site conditions. The 2021 HHRA derived the following conclusions for future human receptors:

- **Future Hypothetical Residents.** For groundwater, potentially unacceptable risks and hazards were identified from exposure to manganese.
- **Future Site Workers.** No potentially unacceptable risks or hazards were identified for exposure to groundwater.

6.2 Updated Risk Assessment and Hazard Index

The HHRA for Line 6 was updated using the SRI data, given that these data are more current than the 2005 and 2006 data, and the SRI has shown that the 2005 and 2006 manganese results were temporarily elevated. The conceptual exposure model, exposure assessment, toxicity assessment, risk characterization, and uncertainty analysis for Line 6 were included in the previous HHRA (CH2M, 2021). The HHRA update included screening the 2022–2023 manganese data against USEPA's tap water RSL (USEPA, 2023), identifying an exposure point concentration, and calculating receptor-specific HIs.

As indicated in Section 2.4.2, the 2022–2023 manganese data are considered usable and representative of drinking water regardless of screen interval or aquifer sampled. Manganese was the only analyte evaluated in this HHRA.

Groundwater is not currently being used as a potable water source, and there are no plans to use groundwater for potable purposes in the future. Therefore, the HHRA for Line 6 evaluates potential exposures to groundwater due to its potential future use as a drinking water source. This entails the evaluation of future residential exposures to groundwater.

The following potential future human receptors were identified in the HHRA for Line 6:

- **Future Site Workers.** Future site workers could contact groundwater based on potential future use as a drinking water source at Line 6.

- **Future Hypothetical Residents.** Future hypothetical residents could contact groundwater based on potential future use as a drinking water source at Line 6.

Results from the 2021 HHRA (CH2M, 2021) showed that there were no risk exceedances for the future site worker; therefore, risks were not reassessed for this receptor in the SRI. Risk conclusions for the future site worker would not change (i.e., not risk exceedance) because manganese concentrations from 2022-2023 are less than those used in the 2021 HHRA. Because the hypothetical future resident (adult and child) was the only receptor in the 2021 RI with potentially unacceptable risks and hazards, the resident is the only receptor evaluated in the updated HHRA.

The results of the HHRA update are included in Appendix C. The screening process for a hypothetical future resident potentially exposed to groundwater is presented in Appendix C-2, Table 2.1. The maximum manganese concentration, for both the total and dissolved forms (620 µg/L and 660 µg/L, respectively), exceeded the tap water RSL of 43 µg/L (based on HQ = 0.1); therefore, noncarcinogenic hazards were calculated for manganese. A sufficient number of samples and detected concentrations were not available for manganese (i.e., there were fewer than eight samples) to calculate a 95 percent upper confidence level on the mean, so the maximum detected concentration was selected as the exposure point concentration (Appendix C-2, Table 3.1).

The exposure factors used in the intake calculations for the residential scenario were included in the 2021 HHRA. The primary references for the exposure factor values are the standard default exposure factors for residents (adult and child) presented in the Human Health Evaluation Manual *Update of Standard Default Exposure Factors* (USEPA, 2014). The oral toxicity values and inhalation toxicity values used in the updated HHRA were obtained from the USEPA standard hierarchy of toxicity value sources (USEPA, 2003) and are presented in Appendix C-2, Table 7.1. The newly calculated hazard index was based on maximum total manganese concentrations observed in 2022 and 2023 (Appendix C-2, Table 7.1). The updated risk assessment is summarized in Table 4:

Table 4. Updated Risk Assessment Summary

Total Manganese	EPC µg/L	Adult Resident HI	Child Resident HI
2023 EPC (Maximum)	640	0.9	1

EPC = exposure point concentration
HI = hazard index
µg/L = micrograms per litter

Using the new total manganese data collected during the SRI, the updated HI does not exceed 1 for an adult or a child resident. Therefore, the manganese concentrations observed in groundwater at Line 6 do not pose an unacceptable risk to potential future residents. Therefore, there are no COCs for Line 6 groundwater, and this site qualifies for a No Further Action decision for groundwater based on the results of the HHRA.

Although risks were not quantified for site workers, the manganese concentrations observed in groundwater at Line 6 would not pose an unacceptable risk to potential future site workers. The standard default exposure factors for a site worker are lower than those for a resident; thus, the hypothetical resident scenario is protective of the worker scenario.

6.3 Uncertainty Analysis

The HHRA has inherent uncertainty. Site-specific uncertainties associated with the HHRA for Line 6 are discussed below.

The maximum detected concentration was used as the EPC for manganese because there were fewer than eight samples (i.e., the minimum number of samples used to calculate the upper confidence limit of the mean) in the 2022–2023 data set. The use of the maximum detected concentration as the EPC likely overestimates the hazards associated with potential exposures to groundwater because it is not likely that a receptor would be exposed to the maximum detected concentration for the full assumed exposure duration (20 years for an adult and 6 years for a child).

Potential excess lifetime cancer risks for ingestion and dermal contact exposures to manganese in groundwater could not be estimated because oral and dermal cancer slope factors have not been established for this chemical. Therefore, if manganese is a potential carcinogen, it is possible that carcinogenic risks could be underestimated in the HHRA. The current USEPA weight of evidence for cancer classification for manganese is "D" (not classifiable as to human carcinogenicity).

Total and dissolved manganese were analyzed in the groundwater samples. The total manganese concentrations ranged from 23 µg/L to 620 µg/L, while the dissolved manganese concentrations ranged from 30 µg/L to 660 µg/L (Appendix C, Table 2.1). The child HIs for total manganese and dissolved manganese were 1 (Appendix C, Table 2.1) and 2 (Appendix C, Table 7.2), respectively. USEPA recommends that data from unfiltered water samples be used in the HHRA.

For the Line 6 HHRA conducted in 2021, risk estimates were calculated for five chemicals (arsenic, chromium, cobalt, manganese, and vanadium) identified as COPCs (i.e., chemicals exceeding screening levels). Excluding four COPCs from the updated HHRA can underestimate risks. However, three of the COPCs (arsenic, chromium, and vanadium) from the 2021 HHRA were determined to be within background (i.e., naturally occurring), and the fourth COPC (cobalt) had HIs for the future hypothetical resident of 0.1 (adult) and 0.2 (child), which are less than the USEPA's threshold HI of 1.

7. Conclusions

Concentrations of manganese in groundwater at Line 6 remain comparable to background levels observed in the region. There were only two monitoring wells with exceedances of the total manganese BTV; however, manganese concentrations in both wells were within the same order of magnitude of the BTV. The groundwater sampling events in 2005 and 2006 observed abnormally elevated concentrations of manganese in groundwater that triggered a supplemental groundwater sampling event, which was performed in 2022 and 2023. Results from the 2022 and 2023 SRI are similar to those observed prior to the 2005 and 2006 groundwater events; therefore, elevated manganese concentrations in groundwater during the 2005–2006 events were likely associated with temporary, localized geochemical conditions rather than a site release. Geochemical parameters in 2005 and 2006 were notably less aerobic and more reducing when compared to those for 2022 and 2023; this could have caused the spike in manganese concentrations during the 2005 and 2006 events. Additionally, in 2005 and 2006, there was no apparent spatial pattern or source associated with the elevated concentrations, and no localized or source trends could be identified.

The HHRA for Line 6 was updated using the more current SRI data that was collected in 2022 and 2023. The newly calculated, and more appropriate HI, resulting from the current data indicates that no unacceptable risks are associated with manganese in groundwater at Line 6. Therefore, NFA for

groundwater at Line 6 is warranted. It is recommended that NFA be presented as the preferred remedy in an OU-11 proposed plan.

Notes:
1. Concentration data is shown in micrograms per liter (µg/L).
2. Mn-D - Manganese, dissolved
3. Mn-T - Manganese, total
4. Wells were sampled in October 1992, October 2005, April 2006, August 2022 and January 2023, as indicated.
5. Generalized groundwater flow direction elevation data are from May 2017
6. Red data indicates an exceedance in both project action level (PAL; 300 µg/L) and Background Threshold Value (BTV; 580 µg/L) for Mn-T; red also indicates an exceedance in PAL for Mn-D, as a BTV is not available; blue data indicates the Mn-T concentrations observed in 2022/2023 did not exceed BTV. Only non-exceedances from the 2022/2023 events are displayed for reference; historical non-exceedances are not shown on this figure.

Project Action Levels
Mn-D and Mn-T = 300 µg/L

Background Threshold Values
Mn-T = 580 µg/L

After DTW Initial, Probe which touched water covered in grey, turbid liquid/sediment. At 1155, 100 Filter. Call Joe Spies and Solve at 1200. Due to high turbidity and irregular flow (manually cycling flow due to deficient compressor), Taylor Sullivan authorized Sampling after pH, Cond, ORP, and DO are Stable. ?

600 Dr. Martin Luther King Jr. Place
Louisville, Kentucky 40202-2232

June 2023

Contents

Tables

Abbreviations and Acronyms

DL	Detection limit
EB	Equipment blank
EPA	U.S. Environmental Protection Agency
FD	field duplicate
ICS	interference check standard
LCS	laboratory control sample
LOD	Limit of detection
LOQ	Limit of quantitation
MS/MSD	matrix spike/matrix spike duplicate
PARCC	precision, accuracy, representativeness, completeness and comparability
QAPP	Uniform Federal Policy–Quality Assurance Project Plan Addendum for Remedial Investigation at Contaminated Waste Processor, Line 3A Sewage Treatment Plant/Drying Beds, and Line 6 Ammo Production (Detonator) Groundwater, Iowa Army Ammunition Plant, Middletown, Iowa (CH2M, 2022)
RPD	Relative percent difference
SDG	sample delivery group

Data Quality Evaluation Report

1. Introduction

This Data Quality Evaluation Report contains an assessment of the quality and usability of analytical data from groundwater samples collected at the Iowa Ammunition Plant, OU11, Middletown, Iowa project site. CH2M collected the samples August 21 through August 22, 2022 and January 11, 2023.

The analytical work was conducted in accordance with the project-specific Quality Assurance Project Plan Addendum for Remedial Investigation at Contaminated Waste Processor, Line 3A Sewage Treatment Plant/Drying Beds, and Line 6 Ammo Production (Detonator) Groundwater, Iowa Army Ammunition Plant, Middletown, Iowa (CH2M, 2022).

The analytical results were evaluated using the criteria of precision, accuracy, representativeness, comparability and completeness (PARCC) as described in the QAPP. This report is intended as a general data quality assessment designed to summarize data issues.

2. Analytical Laboratories and Analytical Methods

CH2M collected seven groundwater samples, two field duplicates (FD), two matrix spike (MS)/matrix spike duplicates (MSD), and two equipment blanks (EB). The data were reported in two sample delivery groups (SDG). The list of samples and collection dates is provided in Table 1. The samples were collected and shipped via overnight carrier to Eurofins TestAmerica Laboratory in Denver, Colorado. The samples were analyzed for total and dissolved manganese by Method SW6020.

3. Data Review and Validation Process

Analytical data from this investigation were evaluated as described in the QAPP. One hundred percent of definitive analytical results were validated, Stage 2B. The assessment of definitive data includes a review of the following laboratory summary forms as defined in the QAPP:

- Chain-of-custody documentation
- Holding time compliance
- Sample results and detection limit checks
- QC sample frequencies
- Blanks (method, field, calibration)
- Laboratory control sample recoveries
- Surrogate spike recoveries
- MS/MSD recoveries and precision

- Initial and continuing calibration summary information
- Internal Standards
- Tuning criteria
- Confirmation column criteria (where applicable) precision
- Interference check standards
- Field duplicate precision
- Serial dilutions
- Post digestion spikes
- Case narrative review, laboratory flagging review, and other method specific criteria

Data flags were assigned according to the QAPP. These flags, as well as the reason for each flag, are entered into the electronic database. Multiple flags are routinely applied to specific sample method/matrix/analyte combinations. The data reported will be qualified by a single flag that reflects the most conservative of the applied validation qualifiers.

4. Data Validation Findings

The summary of the data validation is contained in the following sections below. Final qualified data is presented in Table 2 and Table 3. Table 2 presents the final qualified data for each sample. Table 3 presents each validation flag applied to a method/matrix/analyte as a percentage of the results impacted by a specific data quality condition, with respect to the total results available for any target analyte/matrix.

4.1 Holding Time

Holding time and preservation criteria were met.

4.2 Calibrations

Initial and continuing calibration analyses were performed as required by the methods and acceptance criteria were met with the following exception:

- The percent difference (%D) for total manganese was greater than criteria in one low level continuing calibration verification (CCVL), indicating a possible high bias. As the associated sample concentration was significantly greater than the CCVL concentration, the data were not qualified.

4.3 Blanks

Method blanks, calibration blanks and field blanks were analyzed as required and were free of contamination with the following exception:

- Dissolved manganese was detected at a concentration less than the limit of quantitation (LOQ) in the equipment blanks. The data were not qualified because the concentrations in the samples were significantly greater than the blank concentration and LOQ.

4.4 Laboratory Control Sample

LCS/LCSDs were analyzed as required and accuracy and precision criteria were met.

4.5 Matrix Spike/Matrix Spike Duplicate

MS/MSD samples were analyzed as required and accuracy and precision criteria were met with the following exception:

- Dissolved and total manganese were recovered at concentrations greater than the upper control limit in the MS/MSD for sample OU11-T-21-011123; however, the parent sample concentrations were greater than four times the spike concentrations. The data were not qualified per the QAPP.

4.6 Post Digestion Spikes/Serial Dilutions

Post digestion spike (PDS) samples and/or serial dilutions were analyzed as required and accuracy and precision criteria were met.

4.7 Interference Check Standards

Interference Check Standards (ICS) were analyzed as required and accuracy criteria were met.

4.8 Internal Standards

Internal standards were added to the samples for methods requiring their use and acceptance criteria were met.

4.9 Field Duplicates

FDs were collected at the required frequency and precision criteria were met.

4.10 Sample Quantitation

The relative percent difference between the dissolved and total concentration exceeded criteria in sample OU11-T-31-082122. The data were qualified as estimated and flagged "J" in the sample.

4.11 Chain of Custody

One of two chain of custodies associated with SDG 280-165769-1 was not signed by the field team in error. As the unsigned COC was included in the same cooler as the signed COC and the laboratory analyzed the associated sample for the requested methods, there is no impact to data quality.

5. Overall Assessment

The quality of the field sampling efforts and laboratory results were evaluated for compliance with project data quality objectives through a review of overall precision, accuracy, representativeness, comparability, and completeness (PARCC). Procedures used to assess PARCC are in accordance with the respective analytical methods and the QAPP requirements.

5.1 Precision

Precision of the data were verified through the review of the field and laboratory data quality indicators that include FD, LCS/LCSD, MS/MSD and serial dilution RPDs. Precision was in control.

5.2 Accuracy

Accuracy of the data was verified through the review of the calibration data, LCS/LCSD, internal standard, post digestion spike, ICS and MS/MSD recoveries, as well as the evaluation of method/calibration/field blank data. Accuracy was acceptable.

5.3 Representativeness

Sample data are representative of the site conditions at the time of sample collection and was verified through the sample's collection, storage and preservation procedures and the verification of holding-time compliance. No issues were noted for sample collection, storage or preservation procedures. Analytical data were reported from an analysis within the project-specified hold-time.

5.4 Comparability

Comparability of the data was verified through the use of standard EPA analytical procedures and standard units for reporting. Results obtained are comparable to industry standards in that the collection and analytical techniques followed approved, documented procedures.

5.5 Completeness

Completeness is a measure of the number of valid measurements obtained in relation to the total number of measurements planned. Completeness is expressed as the percentage of valid or usable measurements compared to planned measurements. Valid data are defined as all data that are not qualified "X." All data

were considered valid. The completeness goal of 90 percent was met for all method/analytes combinations.

5.6 Sensitivity

Sensitivity is the ability of an analytical method or instrument to discriminate between measurement responses representing different concentrations. Sensitivity was acceptable as the selected laboratory method LOQs met the project specific objectives.

6. Conclusions

During data validation, no data were rejected, and only two results were qualified as estimated due to dissolved concentrations being greater than total concentrations for manganese. The data are determined to be usable for project decisions with the validation flags applied to the samples.

QAQC Type

EB = Equipment (Rinsate) Blank

FD = Field Duplicate

MS = Matrix Spike

N = Normal

SD = Matrix Spike Duplicate

Table 2. Data Quality Summary

Method	NativeID	COC Number	Analyte	Units	Final Result	Validation Flag	Validation Reason
SW6020	OU11-T-31-082122	280-165769-1	Manganese	µg/L	35	J	D_Metals>T_Metals
SW6020	OU11-T-31-082122	280-165769-1	Manganese, Dissolved	µg/L	49	J	D_Metals>T_Metals

µg/L = microgram(s) per liter

D_Metals>T_Metals = The dissolved concentration was greater than total concentration and greater than criteria.

TABLE 3. Site Completeness by Analyte - Flagging Statistics

Matrix / Method	Number of Samples	Analyte				
WATER						
SW6020	18	**Manganese**				
Validation Flag Category: Miscellaneous	1	J	Flags	(5.56%)	for	Dissolved metals greater than total metals
Validation Flag Category: Miscellaneous	1	J	Flags	(5.56%)	for	Dissolved metals greater than total metals

Note: The total number of validation flags may exceed the actual number of samples if multiple flags were applied to the same sample. Consequently, the percentage of total flags (flags applied/number of samples) may exceed 100 percent.

* The most severe flag for each analyte becomes the final validation flag.

Qualifier Description:

J = The analyte was positively identified, the quantitation is an estimate.

The test results in this report relate only to the samples in this report and meet all requirements of NELAC, with any exceptions noted. Pursuant to NELAP, this report shall not be reproduced except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the Eurofins TestAmerica Denver Project Manager.

The Lab Certification ID# is 4025.

Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Table of Contents

Table of Contents

Qualifiers

Metals

Qualifier	Qualifier Description
D	The reported value is from a dilution.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

CASE NARRATIVE

Client: Jacobs Engineering Group, Inc.

Project: Iowa Army Ammunition Plant RI/FS, IA

Report Number: 280-165769-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 8/23/2022 9:50 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.8º C and 1.1º C.

Receipt Exceptions

The Chain-of-Custody (COC) was incomplete as received and/or improperly completed. The 2nd page of the COCs is not relinquished.

DISSOLVED METALS (ICP/MS)

Samples OU11-T-12-082222 (280-165769-1), OU11-T-17-082122 (280-165769-2), OU11-T-18-082222 (280-165769-3), OU11-T-19-082022 (280-165769-4), OU11-T-20-082022 (280-165769-5), OU11-T-31-082122 (280-165769-6), OU11-FD01-082122 (280-165769-7), EB01-082122 (280-165769-8), EB02-082122 (280-165769-9) and EB01-082222 (280-165769-10) were analyzed for dissolved metals (ICP/MS) in accordance with 6020A. The samples were prepared on 08/25/2022 and analyzed on 08/29/2022.

It was noted that dissolved Mn exceeded total Mn in sample OU11-T-31-082122 (280-165769-6); however, analysis of raw sample from respective bottles indicated higher Mn level in field filtered bottle vs unfiltered bottle.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL METALS (ICP/MS)

Samples OU11-T-12-082222 (280-165769-1), OU11-T-17-082122 (280-165769-2), OU11-T-18-082222 (280-165769-3), OU11-T-19-082022 (280-165769-4), OU11-T-20-082022 (280-165769-5), OU11-T-31-082122 (280-165769-6), OU11-FD01-082122 (280-165769-7), EB01-082122 (280-165769-8), EB02-082122 (280-165769-9) and EB01-082222 (280-165769-10) were analyzed for total metals (ICP/MS) in accordance with 6020A. The samples were prepared and analyzed on 08/24/2022.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Accreditation/Certification Summary

Client: Jacobs Engineering Group, Inc. Job ID: 280-165769-1
Project/Site: Iowa Army Ammunition Plant RI/FS, IA

Laboratory: Eurofins Denver

The accreditations/certifications listed below are applicable to this report.

Authority	Program	Identification Number	Expiration Date
A2LA	Dept. of Defense ELAP	2907.01	10-31-23
Iowa	State	IA#370	12-02-22

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

Analysis Method	Prep Method	Matrix	Analyte
6020A	3005A	Water	Manganese
6020A	3020A	Water	Manganese

Method Summary

Client: Jacobs Engineering Group, Inc. Job ID: 280-165769-1
Project/Site: Iowa Army Ammunition Plant RI/FS, IA

Method	Method Description	Protocol	Laboratory
6020A	Metals (ICP/MS)	SW846	EET DEN
3005A	Preparation, Total Recoverable or Dissolved Metals	SW846	EET DEN
3020A	Preparation, Total Metals	SW846	EET DEN

CERTIFICATE OF ANALYSIS

Single-Element Aqueous CRM

Product #: TA-1000511

SE Std Silver (Ag) – 1000 µg/mL

Product Lot #: 1026960-69

Matrix: 5% HNO_3

Source Material Lot #: T26E048/R22A010

Element	Certified Concentration & Uncertainty
Ag	1010 ± 4 µg/mL (w/v)
	1008 ± 4 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.999% pure silver (Ag) metal dissolved in high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3151, lot #160729**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Ce	<0.2	Gd	<0.2										

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Health and Safety Information: Refer to the Safety Data Sheet (SDS).

Homogeneity: This solution was determined to be homogeneous by procedures consistent with the requirements of ISO 17034 and ISO Guide 35. Replicate samples of the finished solution were analyzed to confirm its homogeneity, in accordance with internal procedures for assessment of homogeneity and stability. To ensure homogeneity, users should not take a smaller sub-sample than specified in the Instructions for Use, as doing so will invalidate the certified values and uncertainties.

Quality Manual Rev No. 7, July 24, 2019

Further Information: Please contact CPI International for further information about this material.

Quality Certifications: This material was prepared under a quality management system that is registered/accredited to the following:

- ISO 17034 Accredited: Reference Materials Producer, A2LA Certificate No. 2848.02 – General Requirements for the Competence of Reference Material Producers
    - ISO 17034 references additional requirements specified in ISO Guide 31 and ISO Guide 35
- ISO/IEC 17025 Accredited: Chemical Testing, A2LA Certificate No. 2848.01 – General Requirements for the Competence of Testing and Calibration Laboratories
- ISO 9001 Certified: Quality Management Systems, Certificate Registration No. 56 100 19560101 – Requirements *(Registrar: TUV NORD)*

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001, ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.99% Uranyl (VI) Nitrate Hexahydrate dissolved in high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 10M64-1D, lot# 1733101**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Product #: S4400-10M591

Lot #: 1161822-1

Element	Certified Concentration & Uncertainty
Th	9971 ± 49 µg/mL (w/v)
	9064 ± 44 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (RM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This RM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to, **ISO 17034**, **ISO/IEC 17025** and **ISO 9001**. This RM was prepared to a nominal concentration of 10,000 µg/mL by gravimetric methods using pure thorium nitrate [$Th(NO_3)_4$]. The solution was diluted with filtered (0.22um), 18 M-ohm water and stabilized with the appropriate high-purity acid as indicated in the listed matrix. The balances used in the preparation of this RM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable method against an alternate lot as NIST SRM is not available. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the RM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original RM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see final page)**. The solution was stabilized using high purity nitric acid (HNO_3), trace hydrofluoric acid (HF) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see final page)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Health and Safety Information: Refer to the Safety Data Sheet (SDS).

Homogeneity: This solution was determined to be homogeneous by procedures consistent with the requirements of ISO 17034 and ISO Guide 35. Replicate samples of the finished solution were analyzed to confirm its homogeneity, in accordance with internal procedures for the assessment of homogeneity and stability. To ensure homogeneity, users should not take a smaller sub-sample than specified in the Instructions for Use, as doing so will invalidate the certified values and uncertainties.

Further Information: Please contact CPI International for further information about this material.

Quality Certifications: This material was prepared under a quality management system that is registered/accredited to the following:

- ISO 17034 Accredited: Reference Materials Producer, A2LA Certificate No. 2848.02 – General Requirements for the Competence of Reference Material Producers
  - ISO 17034 references additional requirements specified in ISO Guide 31 and ISO Guide 35
- ISO/IEC 17025 Accredited: Chemical Testing, A2LA Certificate No. 2848.01 – General Requirements for the Competence of Testing and Calibration Laboratories
- ISO 9001 Certified: Quality Management Systems, Certificate Registration No. 56 100 19560101 – Requirements *(Registrar: TUV NORD)*

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two or More Methods

Certified Value, $X_{CRM/RM}$, where two or more methods of characterization are used is the weighted mean of the results:

$X_{CRM/RM} = \Sigma(w_i)(X_i)$

X_i = mean of Assay Method i with standard uncertainty $u_{char\ i}$

w_i = the weighting factors for each method calculated using the inverse square of the variance:

$w_i = (1/u_{char\ i})^2 / (\Sigma(1/(u_{char\ i})^2)$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char} = [\Sigma((w_i)^2\,(u_{char\ i})^2)]^{½}$ where $u_{char\ i}$ are the errors from each characterization method

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM} = (X_a)\,(u_{char\ a})$

X_a = mean of Assay Method A with

$u_{char\ a}$ = the standard uncertainty of characterization Method A

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char\ a}$ = the errors from characterization

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

N/A

6.0 INTENDED USE

- For the calibration of analytical instruments and validation of analytical methods as appropriate.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag, keep cap tightly sealed when not in use and store between 4° - 24° C to minimize the effects of transpiration. Use at 20° ± 4° C to minimize volumetric dilution error when using the reported density. Do not pipette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.2 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.3 ISO 17034 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

Inorganic Ventures, 300 Technology Drive, Christiansburg, Va. 24073, USA; Telephone: 800.669.6799; 540.585.3030, Fax: 540.585.3012; inorganicventures.com; info@inorganicventures.com

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

July 28, 2022

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **July 28, 2027**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year (or six months in the case of a 30 mL bottle) from the date of opening the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being stored and handled in accordance with the instructions given in Sec. 7.1.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two or More Methods

Certified Value, $X_{CRM/RM}$, where two or more methods of characterization are used is the weighted mean of the results:

$X_{CRM/RM} = \Sigma(w_i)(X_i)$

X_i = mean of Assay Method i with standard uncertainty $u_{char\ i}$

w_i = the weighting factors for each method calculated using the inverse square of the variance:

$w_i = (1/u_{char\ i})^2 / (\Sigma(1/(u_{char\ i})^2)$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char} = [\Sigma((w_i)^2\ (u_{char\ i})^2)]^{½}$ where $u_{char\ i}$ are the errors from each characterization method

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM} = (X_a)\ (u_{char\ a})$

X_a = mean of Assay Method A with

$u_{char\ a}$ = the standard uncertainty of characterization Method A

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char\ a}$ = the errors from characterization

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

Health and Safety Information: Refer to the Safety Data Sheet (SDS).

Homogeneity: This solution was determined to be homogeneous by procedures consistent with the requirements of ISO 17034 and ISO Guide 35. Replicate samples of the finished solution were analyzed to confirm its homogeneity, in accordance with internal procedures for the assessment of homogeneity and stability. To ensure homogeneity, users should not take a smaller sub-sample than specified in the Instructions for Use, as doing so will invalidate the certified values and uncertainties.

Further Information: Please contact CPI International for further information about this material.

Quality Certifications: This material was prepared under a quality management system that is registered/accredited to the following:

- ISO 17034 Accredited: Reference Materials Producer, A2LA Certificate No. 2848.02 – General Requirements for the Competence of Reference Material Producers
    - ISO 17034 references additional requirements specified in ISO Guide 31 and ISO Guide 35
- ISO/IEC 17025 Accredited: Chemical Testing, A2LA Certificate No. 2848.01 – General Requirements for the Competence of Testing and Calibration Laboratories
- ISO 9001 Certified: Quality Management Systems, Certificate Registration No. 56 100 19560101 – Requirements *(Registrar: TUV NORD)*

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see final page)**. The solution was stabilized using high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see final page)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Ge	3120a	-	Rh	3144	3144			

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see final page)**. The solution was stabilized using high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see final page)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two or More Methods

Certified Value, $X_{CRM/RM}$, where two or more methods of characterization are used is the weighted mean of the results:

$X_{CRM/RM} = \Sigma(w_i)(X_i)$

X_i = mean of Assay Method i with standard uncertainty $u_{char\ i}$

w_i = the weighting factors for each method calculated using the inverse square of the variance:

$w_i = (1/u_{char\ i})^2 / (\Sigma(1/(u_{char\ i})^2)$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{1/2}$

k = coverage factor = 2

$u_{char} = [\Sigma((w_i)^2\,(u_{char\ i})^2)]^{1/2}$ where $u_{char\ i}$ are the errors from each characterization method

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM} = (X_a)\,(u_{char\ a})$

X_a = mean of Assay Method A with

$u_{char\ a}$ = the standard uncertainty of characterization Method A

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{1/2}$

k = coverage factor = 2

$u_{char\ a}$ = the errors from characterization

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

CRM/RMs are tested for trace metallic impurities by Axial ICP-OES and ICP-MS. The result from the most sensitive method for each element, is reported below. Solutions tested by ICP-MS were analyzed in an ULPA-Filtered Clean Room. An ULPA-Filter is 99.9985% efficient for the removal of particles down to 0.3 µm.

6.0 INTENDED USE

- For the calibration of analytical instruments and validation of analytical methods as appropriate.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag, keep cap tightly sealed when not in use and store between 4° - 24° C to minimize the effects of transpiration. Use at 20° ± 4° C to minimize volumetric dilution error when using the reported density. Do not pipette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.2 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.3 ISO 17034 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

Inorganic Ventures, 300 Technology Drive, Christiansburg, Va. 24073, USA; Telephone: 800.669.6799; 540.585.3030, Fax: 540.585.3012; inorganicventures.com; info@inorganicventures.com

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

July 06, 2021

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **July 06, 2025**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year (or six months in the case of a 30 mL bottle) from the date of opening the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being stored and handled in accordance with the instructions given in Sec. 7.1.

CERTIFICATE OF ANALYSIS

Multi-Element Aqueous CRM

Product #: TA-CAL3-SS

Lot #: 1072838-1

ICP ICPMS CAL Mix # 3

Matrix: 5% HNO_3/tr. HF

Element	Certified Concentration & Uncertainty	Element	Certified Concentration & Uncertainty
P	1000 ± 5 mg/L	U	100.1 ± 0.5 mg/L
S	1000 ± 5 mg/L	W	100.1 ± 0.5 mg/L

Source Material Lot # Chart

Element	Source Material Lot #	Element	Source Material Lot #
P	AQ18-51PX	U	AN17-162UX
S	AM17-68SX	W	AH17-138WX

Intended Use: This solution is intended for use as a second source certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see reverse side)**. The solution was stabilized using high purity nitric acid (HNO_3), trace hydrofluoric acid (HF) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see reverse side)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Health and Safety Information: Refer to the Safety Data Sheet (SDS).

Homogeneity: This solution was determined to be homogeneous by procedures consistent with the requirements of ISO 17034 and ISO Guide 35. Replicate samples of the finished solution were analyzed to confirm its homogeneity, in accordance with internal procedures for the assessment of homogeneity and stability. To ensure homogeneity, users should not take a smaller sub-sample than specified in the Instructions for Use, as doing so will invalidate the certified values and uncertainties.

Quality Manual Rev: No. 7, July 24, 2019

Further Information: Please contact CPI International for further information about this material.

Quality Certifications: This material was prepared under a quality management system that is registered/accredited to the following:

- ISO 17034 Accredited: Reference Materials Producer, A2LA Certificate No. 2848.02 – General Requirements for the Competence of Reference Material Producers
  - ISO 17034 references additional requirements specified in ISO Guide 31 and ISO Guide 35
- ISO/IEC 17025 Accredited: Chemical Testing, A2LA Certificate No. 2848.01 – General Requirements for the Competence of Testing and Calibration Laboratories
- ISO 9001 Certified: Quality Management Systems, Certificate Registration No. 56 100 19560101 – Requirements *(Registrar: TUV NORD)*

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two or More Methods

Certified Value, $X_{CRM/RM}$, where two or more methods of characterization are used is the weighted mean of the results:

$X_{CRM/RM} = \Sigma(w_i)(X_i)$

X_i = mean of Assay Method i with standard uncertainty $u_{char\ i}$

w_i = the weighting factors for each method calculated using the inverse square of the variance:

$w_i = (1/u_{char\ i})^2 / (\Sigma(1/(u_{char\ i})^2)$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char} = [\Sigma((w_i)^2\,(u_{char\ i})^2)]^{½}$ where $u_{char\ i}$ are the errors from each characterization method

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM} = (X_a)\,(u_{char\ a})$

X_a = mean of Assay Method A with

$u_{char\ a}$ = the standard uncertainty of characterization Method A

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char\ a}$ = the errors from characterization

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

N/A

6.0 INTENDED USE

- For the calibration of analytical instruments and validation of analytical methods as appropriate.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag, keep cap tightly sealed when not in use and store between 4° - 24° C to minimize the effects of transpiration. Use at 20° ± 4° C to minimize volumetric dilution error when using the reported density. Do not pipette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

Note: This solution contains Silver (Ag), please refer to our Sample Preparation Guide for more information.

https://www.inorganicventures.com/sample-preparation-guide/samples-containing-silver

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.2 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.3 ISO 17034 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

July 19, 2022

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **July 19, 2027**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year (or six months in the case of a 30 mL bottle) from the date of opening the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being stored and handled in accordance with the instructions given in Sec. 7.1.

Intended Use: This solution is intended for use as a second source certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see final page)**. The solution was stabilized using high purity nitric acid (HNO_3), trace hydrofluoric acid (HF) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see final page)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Chuck Goudreau

Chuck Goudreau, Certifying Officer

Certification Date

CPI International waives all responsibility for any damages resulting from the usage and/or implementation of the products/data described herein.

Health and Safety Information: Refer to the Safety Data Sheet (SDS).

Homogeneity: This solution was determined to be homogeneous by procedures consistent with the requirements of ISO 17034 and ISO Guide 35. Replicate samples of the finished solution were analyzed to confirm its homogeneity, in accordance with internal procedures for the assessment of homogeneity and stability. To ensure homogeneity, users should not take a smaller sub-sample than specified in the Instructions for Use, as doing so will invalidate the certified values and uncertainties.

Quality Manual Rev: No. 7, July 24, 2019

CPI INTERNATIONAL

Catalog Number: TA-CM-APR19-DEN2
Lot Number: 220602

Packaging, Storage, Instructions For Use

Store at room temperature (15-30°C).

This certified reference material (CRM) is packaged in HDPE as a whole volume ready to use sample. No secondary preparative steps are necessary. Allow to equilibrate to room temperature before use. Small aliquots should be poured out of the bottle rather than directly pipetted out of bottle in order to prevent contamination or premature degradation. This CRM was manufactured by NSI Lab Solutions following quality procedures meeting the requirements of ISO 9001, ISO 17025, and ISO 17034.

Traceability Information

Analyte Source Materials: The highest purity analyte source materials are used in the manufacture of this CRM.

Method: This CRM was verified by ICP.

Balance: All analytical balances are calibrated on a semiannual basis by an ISO 17025 accredited calibration laboratory and are traceable to NIST. Traceable Calibration Certificate available upon request.

All balances are checked daily by an in-house standard operating procedure. The weights used for this daily verification are calibrated annually by an ISO 17025 accredited calibration laboratory and are certified traceable to NIST. Certificate of Calibration and Traceability available upon request.

Thermometer: All thermometers are NIST traceable through thermometers that are calibrated annually by an ISO 17025 accredited calibration laboratory.

Glassware: All glassware used in the manufacture of our CRMs is Class A. An in-house standard operating procedure is used to verify all glassware prior to it being placed into service. Volumetric pipetors are calibrated every four months by an ISO 17025 accredited calibration laboratory.

Intended Uses

- Calibration of analytical instruments
- Validation of analytical methods
- Preparation of working level reference materials, i.e. "check standards"
- Detection limit studies

Uncertainty

The ± uncertainty associated with the concentration is the expanded manufacturing uncertainty at 95% confidence interval (CI) with K=2.

Homogeneity

This CRM was thoroughly mixed in production and is guaranteed homogeneous.

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	False	COC not relinquished.
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

See page two for job notes and contact information.

Eurofins Denver

Job Notes

The test results in this report relate only to the samples in this report and meet all requirements of NELAC, with any exceptions noted. Pursuant to NELAP, this report shall not be reproduced except in full, without the written approval of the laboratory. All questions regarding this report should be directed to the Eurofins TestAmerica Denver Project Manager.

The Lab Certification ID# is 4025.

Reporting limits are adjusted for sample size used, dilutions and moisture content if applicable.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins TestAmerica Project Manager.

Table of Contents

Table of Contents

Qualifiers

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
D	The reported value is from a dilution.
J	Estimated: The analyte was positively identified; the quantitation is an estimation
J1	Estimated: The quantitation is an estimation due to discrepancies in meeting certain analyte-specific quality control criteria.
Q	One or more quality control criteria failed.
U	Undetected at the Limit of Detection.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

CASE NARRATIVE

Client: Jacobs Engineering Group, Inc.

Project: Iowa Army Ammunition Plant RI/FS, IA

Report Number: 280-171373-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

REVISION 1, MARCH 7, 2023
The report and EDD were revised to correct the sample ID for OU11-FB01-011123 (280-171373-2) to OU11-FD01-011123 (280-171373-2) per client request.

RECEIPT
The samples were received on 1/13/2023 9:20 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.4º C.

DISSOLVED METALS (ICP/MS)
Samples OU11-T-21-011123 (280-171373-1), OU11-FD01-011123 (280-171373-2) and EB01-011123 (280-171373-3) were analyzed for dissolved metals (ICP/MS) in accordance with 6020A. The samples were prepared on 01/26/2023 and analyzed on 01/27/2023 and 01/31/2023.

Manganese failed the recovery criteria high for the MS of sample OU11-T-21-011123MS (280-171373-1) in batch 280-600712.
Manganese failed the recovery criteria high for the MSD of sample OU11-T-21-011123MSD (280-171373-1) in batch 280-600712.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

TOTAL METALS (ICP/MS)
Samples OU11-T-21-011123 (280-171373-1), OU11-FD01-011123 (280-171373-2) and EB01-011123 (280-171373-3) were analyzed for total metals (ICP/MS) in accordance with 6020A. The samples were prepared on 01/23/2023 and analyzed on 01/24/2023 and 01/25/2023.

The low level continuing calibration verification (CCVL) associated with batch 280-600314 recovered below the lower control limit for Mn. The samples associated with this CCV were >10x the level of the CCVL for the affected analytes; therefore, the data have been reported.

Manganese failed the recovery criteria high for the MSD of sample OU11-T-21-011123MSD (280-171373-1) in batch 280-600314.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Detection Summary

Client: Jacobs Engineering Group, Inc. Job ID: 280-171373-1
Project/Site: Iowa Army Ammunition Plant RI/FS, IA

Client Sample ID: OU11-T-21-011123 Lab Sample ID: 280-171373-1

Analyte	Result	Qualifier	LOQ	LOD	DL	Unit	Dil Fac	D	Method	Prep Type
Manganese	620	J1 Q	3.0	1.8	0.51	ug/L	1		6020A	Total/NA
Manganese	660	J1	3.0	1.8	0.51	ug/L	1		6020A	Dissolved

CERTIFICATE OF ANALYSIS

Single-Element Aqueous CRM

Product #: TA-1000511

SE Std Silver (Ag) – 1000 µg/mL

Product Lot #: 1211976-35

Matrix: 5% HNO_3

Source Material Lot #: X24E070

Element	Certified Concentration & Uncertainty
Ag	1006 ± 2 µg/mL (w/v)
	999.0 ± 2.0 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.999% pure silver (Ag) dissolved in high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3151, lot #160729**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Health and Safety Information: Refer to the Safety Data Sheet (SDS).

Homogeneity: This solution was determined to be homogeneous by procedures consistent with the requirements of ISO 17034 and ISO Guide 35. Replicate samples of the finished solution were analyzed to confirm its homogeneity, in accordance with internal procedures for the assessment of homogeneity and stability. To ensure homogeneity, users should not take a smaller sub-sample than specified in the Instructions for Use, as doing so will invalidate the certified values and uncertainties.

Further Information: Please contact CPI International for further information about this material.

Quality Certifications: This material was prepared under a quality management system that is registered/accredited to the following:

- ISO 17034 Accredited: Reference Materials Producer, A2LA Certificate No. 2848.02 – General Requirements for the Competence of Reference Material Producers
    - ISO 17034 references additional requirements specified in ISO Guide 31 and ISO Guide 35

Product #: TA-1000321

Production Lot #: 1137585-76

Source Material Lot #: MND052018A1

Element	Certified Concentration & Uncertainty
Mn	1010 ± 5 µg/mL (w/v)
	1005 ± 5 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to a nominal concentration of 1000 µg/mL by gravimetric methods using 99.98% pure manganese (Mn) dissolved in high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable to **NIST SRM 3132, lot #050429**. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

CERTIFICATE OF ANALYSIS

Single-Element Aqueous RM

Thorium (Th) – 10,000 µg/mL

Matrix: 3% HNO_3

7084654
ID: 10000 Th_00027
Exp:09/24/23 Prpd:LRD Opn:03/07/22
10,000 Th CPI

Product #: S4400-10M591

Lot #: 1161822-1

Element	Certified Concentration & Uncertainty
Th	9971 ± 49 µg/mL (w/v)
	9064 ± 44 µg/g (w/w)

Intended Use: This solution is intended for use as a certified reference material (RM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This RM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to, **ISO 17034**, **ISO/IEC 17025** and **ISO 9001**. This RM was prepared to a nominal concentration of 10,000 µg/mL by gravimetric methods using pure thorium nitrate [$Th(NO_3)_4$]. The solution was diluted with filtered (0.22um), 18 M-ohm water and stabilized with the appropriate high-purity acid as indicated in the listed matrix. The balances used in the preparation of this RM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentration and uncertainty were determined using the "High Performance ICP-OES" protocol developed by NIST, and both the certified concentration and uncertainty values are traceable method against an alternate lot as NIST SRM is not available. The uncertainty associated with the certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Indicative Values: ICP-MS was used to determine trace metal concentrations for this product (nd = not determined).

Cd	<5	Ga	<5	Li	<20	Os	<5	Ru	<5	Tb	<5	Zn	<20
Ce	31	Gd	<2										

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the RM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original RM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see final page)**. The solution was stabilized using high purity nitric acid (HNO_3), trace hydrofluoric acid (HF) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see final page)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two or More Methods

Certified Value, $X_{CRM/RM}$, where two or more methods of characterization are used is the weighted mean of the results:

$X_{CRM/RM} = \Sigma(w_i)(X_i)$

X_i = mean of Assay Method i with standard uncertainty $u_{char\ i}$

w_i = the weighting factors for each method calculated using the inverse square of the variance:

$w_i = (1/u_{char\ i})^2 / (\Sigma(1/(u_{char\ i})^2)$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char} = [\Sigma((w_i)^2\,(u_{char\ i})^2)]^{½}$ where $u_{char\ i}$ are the errors from each characterization method

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM} = (X_a)\,(u_{char\ a})$

X_a = mean of Assay Method A with

$u_{char\ a}$ = the standard uncertainty of characterization Method A

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char\ a}$ = the errors from characterization

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

N/A

6.0 INTENDED USE

- For the calibration of analytical instruments and validation of analytical methods as appropriate.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag, keep cap tightly sealed when not in use and store between 4° - 24° C to minimize the effects of transpiration. Use at 20° ± 4° C to minimize volumetric dilution error when using the reported density. Do not pipette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.2 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.3 ISO 17034 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

Inorganic Ventures, 300 Technology Drive, Christiansburg, Va. 24073, USA; Telephone: 800.669.6799; 540.585.3030, Fax: 540.585.3012; inorganicventures.com; info@inorganicventures.com

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

July 28, 2022

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **July 28, 2027**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year (or six months in the case of a 30 mL bottle) from the date of opening the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being stored and handled in accordance with the instructions given in Sec. 7.1.

Ca	1121798	K	1156013	Na	1122654

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see reverse side)**. The solution was stabilized using high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see reverse side)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Health and Safety Information: Refer to the Safety Data Sheet (SDS).

Homogeneity: This solution was determined to be homogeneous by procedures consistent with the requirements of ISO 17034 and ISO Guide 35. Replicate samples of the finished solution were analyzed to confirm its homogeneity, in accordance with internal procedures for the assessment of homogeneity and stability. To ensure homogeneity, users should not take a smaller sub-sample than specified in the Instructions for Use, as doing so will invalidate the certified values and uncertainties.

Further Information: Please contact CPI International for further information about this material.

Quality Certifications: This material was prepared under a quality management system that is registered/accredited to the following:

- ISO 17034 Accredited: Reference Materials Producer, A2LA Certificate No. 2848.02 – General Requirements for the Competence of Reference Material Producers
    - ISO 17034 references additional requirements specified in ISO Guide 31 and ISO Guide 35
- ISO/IEC 17025 Accredited: Chemical Testing, A2LA Certificate No. 2848.01 – General Requirements for the Competence of Testing and Calibration Laboratories
- ISO 9001 Certified: Quality Management Systems, Certificate Registration No. 56 100 19560101 – Requirements *(Registrar: TUV NORD)*

1.0 ACCREDITATION / REGISTRATION

INORGANIC VENTURES is accredited to ISO 17034, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (QSR Certificate Number QSR-1034).

ACCREDITED Testing Laboratory Certificate 883.01
ACCREDITED Reference Material Producer Certificate 883.02

2.0 PRODUCT DESCRIPTION

Product Code:	Multi Analyte Custom Grade Solution
Catalog Number:	6020ICS-0A
Lot Number:	S2-MEB706044
Matrix:	1% (v/v) HNO3
Value / Analyte(s):	10 000 µg/mL ea: Chloride, 2 000 µg/mL ea: Carbon, 1 000 µg/mL ea: Calcium, Aluminum, Iron, Potassium, Magnesium, Sodium, Phosphorus, Sulfur, 20 µg/mL ea: Titanium, Molybdenum

3.0 CERTIFIED VALUES AND UNCERTAINTIES

ANALYTE	CERTIFIED VALUE	ANALYTE	CERTIFIED VALUE
Aluminum, Al	**1 000 ± 3 µg/mL**	**Calcium, Ca**	**1 000 ± 4 µg/mL**
Carbon, C	**2 001 ± 4 µg/mL**	**Chloride, Cl**	**10 000.0 ± 50.0 µg/mL**
Iron, Fe	**1 000 ± 4 µg/mL**	**Magnesium, Mg**	**1 000 ± 4 µg/mL**
Molybdenum, Mo	**20.01 ± 0.12 µg/mL**	**Phosphorus, P**	**1 000 ± 6 µg/mL**
Potassium, K	**1 000 ± 4 µg/mL**	**Sodium, Na**	**1 000 ± 4 µg/mL**
Sulfur, S	**1 000 ± 4 µg/mL**	**Titanium, Ti**	**20.01 ± 0.14 µg/mL**

Density: 1.031 g/mL (measured at 20 ± 4 ºC)

Assay Information:

ANALYTE	METHOD	NIST SRM#	SRM LOT#

Ti	ICP Assay	3162a	130925

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two or More Methods

Certified Value, $X_{CRM/RM}$, where two or more methods of characterization are used is the weighted mean of the results:

$X_{CRM/RM} = \Sigma(w_i)(X_i)$

X_i = mean of Assay Method i with standard uncertainty $u_{char\ i}$

w_i = the weighting factors for each method calculated using the inverse square of the variance:

$w_i = (1/u_{char\ i})^2 / (\Sigma(1/(u_{char\ i})^2)$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{1/2}$

k = coverage factor = 2

$u_{char} = [\Sigma((w_i)^2\,(u_{char\ i})^2)]^{1/2}$ where $u_{char\ i}$ are the errors from each characterization method

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM} = (X_a)\,(u_{char\ a})$

X_a = mean of Assay Method A with

$u_{char\ a}$ = the standard uncertainty of characterization Method A

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{1/2}$

k = coverage factor = 2

$u_{char\ a}$ = the errors from characterization

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

CRM/RMs are tested for trace metallic impurities by Axial ICP-OES and ICP-MS. The result from the most sensitive method for each element, is reported below. Solutions tested by ICP-MS were analyzed in an ULPA-Filtered Clean Room. An ULPA-Filter is 99.9985% efficient for the removal of particles down to 0.3 µm.

6.0 INTENDED USE

- For the calibration of analytical instruments and validation of analytical methods as appropriate.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag, keep cap tightly sealed when not in use and store between 4° - 24° C to minimize the effects of transpiration. Use at 20° ± 4° C to minimize volumetric dilution error when using the reported density. Do not pipette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.2 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.3 ISO 17034 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

Inorganic Ventures, 300 Technology Drive, Christiansburg, Va. 24073, USA; Telephone: 800.669.6799; 540.585.3030, Fax: 540.585.3012; inorganicventures.com; info@inorganicventures.com

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

July 06, 2021

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **July 06, 2025**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year (or six months in the case of a 30 mL bottle) from the date of opening the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being stored and handled in accordance with the instructions given in Sec. 7.1.

Intended Use: This solution is intended for use as a certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see final page)**. The solution was stabilized using high purity nitric acid (HNO_3) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see final page)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Chuck Goudreau

Chuck Goudreau, Certifying Officer

October 20, 2022
Certification Date

CPI International waives all responsibility for any damages resulting from the usage and/or implementation of the products/data described herein.

Health and Safety Information: Refer to the Safety Data Sheet (SDS).

Homogeneity: This solution was determined to be homogeneous by procedures consistent with the requirements of ISO 17034 and ISO Guide 35. Replicate samples of the finished solution were analyzed to confirm its homogeneity, in accordance with internal procedures for the assessment of homogeneity and stability. To ensure homogeneity, users should not take a smaller sub-sample than specified in the Instructions for Use, as doing so will invalidate the certified values and uncertainties.

Further Information: Please contact CPI International for further information about this material.

Quality Certifications: This material was prepared under a quality management system that is registered/accredited to the following:

- ISO 17034 Accredited: Reference Materials Producer, A2LA Certificate No. 2848.02 – General Requirements for the Competence of Reference Material Producers
    - ISO 17034 references additional requirements specified in ISO Guide 31 and ISO Guide 35
- ISO/IEC 17025 Accredited: Chemical Testing, A2LA Certificate No. 2848.01 – General Requirements for the Competence of Testing and Calibration Laboratories
- ISO 9001 Certified: Quality Management Systems, Certificate Registration No. 56 100 19560101 – Requirements *(Registrar: TUV NORD)*

1.0 ACCREDITATION / REGISTRATION

INORGANIC VENTURES is accredited to ISO 17034, "General Requirements for the Competence of Reference Material Producers" and ISO/IEC 17025, "General Requirements for the Competence of Testing and Calibration Laboratories". Inorganic Ventures is also an ISO 9001 registered manufacturer (QSR Certificate Number QSR-1034).

ACCREDITED Testing Laboratory Certificate 883.01
ACCREDITED Reference Material Producer Certificate 883.02

2.0 PRODUCT DESCRIPTION

Product Code:	Multi Analyte Custom Grade Solution
Catalog Number:	IV-67385
Lot Number:	T2-MEB721663
Matrix:	5% (v/v) HNO3
Value / Analyte(s):	5 000 µg/mL ea: Calcium, Potassium, Magnesium, Sodium, 1 000 µg/mL ea: Phosphorus, Boron, 100 µg/mL ea: Silver, Lithium, Strontium, Thorium, Zinc

3.0 CERTIFIED VALUES AND UNCERTAINTIES

ANALYTE	CERTIFIED VALUE	ANALYTE	CERTIFIED VALUE
Boron, B	**1 000 ± 6 µg/mL**	**Calcium, Ca**	**5 000 ± 22 µg/mL**
Lithium, Li	**100.0 ± 0.4 µg/mL**	**Magnesium, Mg**	**5 000 ± 21 µg/mL**
Phosphorus, P	**1 000 ± 5 µg/mL**	**Potassium, K**	**5 000 ± 22 µg/mL**
Silver, Ag	**100.0 ± 0.4 µg/mL**	**Sodium, Na**	**5 000 ± 22 µg/mL**
Strontium, Sr	**100.0 ± 0.4 µg/mL**	**Thorium, Th**	**100.0 ± 0.5 µg/mL**
Zinc, Zn	**100.0 ± 0.4 µg/mL**		

Density: 1.087 g/mL (measured at 20 ± 4 ºC)

Zn	Calculated		See Sec. 4.2

The following equations are used in the calculation of the certified value and the uncertainty. Reported uncertainties represent expanded uncertainties expressed at approximately the 95% confidence level using a coverage factor of k = 2.

Characterization of CRM/RM by Two or More Methods

Certified Value, $X_{CRM/RM}$, where two or more methods of characterization are used is the weighted mean of the results:

$X_{CRM/RM} = \Sigma(w_i)(X_i)$

X_i = mean of Assay Method i with standard uncertainty $u_{char\ i}$

w_i = the weighting factors for each method calculated using the inverse square of the variance:

$w_i = (1/u_{char\ i})^2 / (\Sigma(1/(u_{char\ i})^2)$

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char} = [\Sigma((w_i)^2\,(u_{char\ i})^2)]^{½}$ where $u_{char\ i}$ are the errors from each characterization method

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

Characterization of CRM/RM by One Method

Certified Value, $X_{CRM/RM}$, where one method of characterization is used is the mean of individual results:

$X_{CRM/RM} = (X_a)(u_{char\ a})$

X_a = mean of Assay Method A with

$u_{char\ a}$ = the standard uncertainty of characterization Method A

CRM/RM Expanded Uncertainty (±) = $U_{CRM/RM} = k\,(u^2_{char\ a} + u^2_{bb} + u^2_{lts} + u^2_{ts})^{½}$

k = coverage factor = 2

$u_{char\ a}$ = the errors from characterization

u_{bb} = bottle to bottle homogeneity standard uncertainty

u_{lts} = long term stability standard uncertainty (storage)

u_{ts} = transport stability standard uncertainty

4.0 TRACEABILITY TO NIST

- This product is traceable to NIST via an unbroken chain of comparisons. The uncertainties for each certified value are reported, taking into account the SRM/RM uncertainty error and the measurement, weighing and volume dilution errors. In rare cases where no NIST SRM/RM are available, the term 'in-house std.' is specified.

4.1 Thermometer Calibration

- All thermometers are NIST traceable through thermometers that are calibrated by an accredited calibration laboratory.

4.2 Balance Calibration

- All analytical balances are calibrated by an accredited calibration laboratory and procedure. The weights used for testing are annually compared to master weights and are traceable to NIST.

4.3 Glassware Calibration

- An in-house procedure is used to calibrate all Class A glassware used in the manufacturing and quality control of CRM/RMs.

5.0 TRACE METALLIC IMPURITIES (TMI) DETERMINED BY ICP-MS AND ICP-OES (µg/mL)

N/A

6.0 INTENDED USE

- For the calibration of analytical instruments and validation of analytical methods as appropriate.

7.0 INSTRUCTIONS FOR THE CORRECT USE OF THIS REFERENCE MATERIAL

7.1 Storage and Handling Recommendations

- Store between approximately 4° - 30° C while in sealed TCT bag.

- While stored in the sealed TCT bag, transpiration of this CRM/RM is negligible. After opening the sealed TCT bag transpiration of the CRM/RM will occur, resulting in a gradual increase in the analyte concentration(s). It is the responsibility of the user to account for this effect. When the bottle is weighed both before and after being placed in storage, the mass difference observed will be a measure of transpiration mass loss.

- After opening the sealed TCT bag, keep cap tightly sealed when not in use and store between 4° - 24° C to minimize the effects of transpiration. Use at 20° ± 4° C to minimize volumetric dilution error when using the reported density. Do not pipette from the container. Do not return removed aliquots to container.

- For more information, visit **www.inorganicventures.com/TCT**

Note: This solution contains Silver (Ag), please refer to our Sample Preparation Guide for more information.

https://www.inorganicventures.com/sample-preparation-guide/samples-containing-silver

8.0 HAZARDOUS INFORMATION

- Please refer to the Safety Data Sheet for information regarding this CRM/RM.

9.0 HOMOGENEITY

- This solution was mixed according to an in-house procedure and is guaranteed to be homogeneous. Homogeneity data indicate that the end user should take a minimum sample size of 0.2 mL to assure homogeneity.

10.0 QUALITY STANDARD DOCUMENTATION

10.1 ISO 9001 Quality Management System Registration

- QSR Certificate Number QSR-1034

10.2 ISO/IEC 17025 "General Requirements for the Competence of Testing and Calibration Laboratories"

- Chemical Testing - Accredited / A2LA Certificate Number 883.01

10.3 ISO 17034 "General Requirements for the Competence of Reference Material Producers"

- Reference Material Producer - Accredited / A2LA Certificate Number 883.02

11.0 CERTIFICATION, LOT EXPIRATION AND PERIOD OF VALIDITY

11.1 Certification Issue Date

July 19, 2022

- The certification is valid within the measurement uncertainty specified provided the CRM/RM is stored and handled in accordance with instructions given in Sec 7.1. This certification is nullified if instructions in Sec 7.1 are not followed or if the CRM/RM is damaged, contaminated, or otherwise modified.

11.2 Lot Expiration Date

- **July 19, 2027**

- The date after which this CRM/RM should not be used.

- The lot expiration date reflects the period of time that the stability of a CRM/RM can be supported by long term stability studies conducted on properly stored and handled CRM/RMs. Lot expiration is limited primarily by transpiration (loss of water from the solution) and infrequently by chemical stability.

11.3 Period of Validity

- Sealed TCT Bag Open Date: _____

- This CRM/RM should not be used longer than one year (or six months in the case of a 30 mL bottle) from the date of opening the aluminized bag or after the date given in Sec. 11.2, whichever comes first. This is contingent upon the CRM/RM being stored and handled in accordance with the instructions given in Sec. 7.1.

Intended Use: This solution is intended for use as a second source certified reference material (CRM) or calibration standard for inductively coupled plasma optical emission spectroscopy (ICP-OES), inductively coupled plasma mass spectrometry (ICP-MS), flame or furnace atomic absorption spectroscopy (AA or GFAA), and other techniques for elemental analysis.

Certification & Traceability: This CRM was manufactured, processed, and/or certified under a quality management system that is registered/accredited to **ISO 9001**, **ISO 17034**, and **ISO/IEC 17025**. This CRM was prepared to the certified concentrations shown above by gravimetric methods, using single-element concentrates that were certified using the "High Performance ICP-OES" protocol developed by NIST and are directly traceable to **NIST SRMs (see final page)**. The solution was stabilized using high purity nitric acid (HNO_3), trace hydrofluoric acid (HF) and diluted with filtered (0.22 µm), 18 M-ohm deionized water. The balances used in the preparation of this CRM are calibrated regularly with traceability to NIST, using a calibration provider that is accredited to ISO/IEC 17025 by a mutually recognized accreditation body. All volumetric dilutions are performed in Class A calibrated glassware. The certified concentrations were determined based upon gravimetric procedures. Secondary verification of the certified concentrations was performed using ICP-OES that was calibrated and/or referenced against **NIST SRMs (see final page)**. The uncertainty associated with each certified concentration represents the expanded uncertainty at the 95% confidence level using a coverage factor of k=2.

Instructions for Use: We recommend that the solution be thoroughly mixed by repeated shaking or swirling of the bottle immediately prior to use. To achieve the highest accuracy, the analyst should: (1) use only pre-cleaned containers and transferware, (2) not pipette directly from the CRM's original container, (3) never pour used product back into the original container, (4) make dilutions using calibrated balances or certified class A volumetric flasks and pipettes, (5) use a minimum sub-sample size of 500 µL, and (6) dilute with the same matrix as the original CRM or other chemically suitable matrix. The solution should be kept tightly capped and stored under normal laboratory conditions. Do not freeze, heat, or immerse the bottle or its contents, and avoid exposure to direct sunlight or moisture.

Period of Validity: CPI International ensures the accuracy of this solution for **18 months** from the certification date shown below, provided the instructions for use are followed. During the period of validity, the purchaser will be notified if this product is recalled due to any significant changes in the stability of the solution.

Chuck Goudreau

Chuck Goudreau, Certifying Officer

August 26, 2021
Certification Date

CPI International waives all responsibility for any damages resulting from the usage and/or implementation of the products/data described herein.

Health and Safety Information: Refer to the Safety Data Sheet (SDS).

Homogeneity: This solution was determined to be homogeneous by procedures consistent with the requirements of ISO 17034 and ISO Guide 35. Replicate samples of the finished solution were analyzed to confirm its homogeneity, in accordance with internal procedures for the assessment of homogeneity and stability. To ensure homogeneity, users should not take a smaller sub-sample than specified in the Instructions for Use, as doing so will invalidate the certified values and uncertainties.

Quality Manual Rev: No. 7, July 24, 2019

Further Information: Please contact CPI International for further information about this material.

Quality Certifications: This material was prepared under a quality management system that is registered/accredited to the following:

- ISO 17034 Accredited: Reference Materials Producer, A2LA Certificate No. 2848.02 – General Requirements for the Competence of Reference Material Producers
    - ISO 17034 references additional requirements specified in ISO Guide 31 and ISO Guide 35
- ISO/IEC 17025 Accredited: Chemical Testing, A2LA Certificate No. 2848.01 – General Requirements for the Competence of Testing and Calibration Laboratories
- ISO 9001 Certified: Quality Management Systems, Certificate Registration No. 56 100 19560101 – Requirements *(Registrar: TUV NORD)*

Catalog Number: TA-CM-APR19-DEN2
Lot Number: 220602

Packaging, Storage, Instructions For Use

Store at room temperature (15-30°C).

This certified reference material (CRM) is packaged in HDPE as a whole volume ready to use sample. No secondary preparative steps are necessary. Allow to equilibrate to room temperature before use. Small aliquots should be poured out of the bottle rather than directly pipetted out of bottle in order to prevent contamination or premature degradation. This CRM was manufactured by NSI Lab Solutions following quality procedures meeting the requirements of ISO 9001, ISO 17025, and ISO 17034.

Traceability Information

Analyte Source Materials: The highest purity analyte source materials are used in the manufacture of this CRM.

Method: This CRM was verified by ICP.

Balance: All analytical balances are calibrated on a semiannual basis by an ISO 17025 accredited calibration laboratory and are traceable to NIST. Traceable Calibration Certificate available upon request.

All balances are checked daily by an in-house standard operating procedure. The weights used for this daily verification are calibrated annually by an ISO 17025 accredited calibration laboratory and are certified traceable to NIST. Certificate of Calibration and Traceability available upon request.

Thermometer: All thermometers are NIST traceable through thermometers that are calibrated annually by an ISO 17025 accredited calibration laboratory.

Glassware: All glassware used in the manufacture of our CRMs is Class A. An in-house standard operating procedure is used to verify all glassware prior to it being placed into service. Volumetric pipetors are calibrated every four months by an ISO 17025 accredited calibration laboratory.

Intended Uses

- Calibration of analytical instruments
- Validation of analytical methods
- Preparation of working level reference materials, i.e. "check standards"
- Detection limit studies

Uncertainty

The ± uncertainty associated with the concentration is the expanded manufacturing uncertainty at 95% confidence interval (CI) with K=2.

Homogeneity

This CRM was thoroughly mixed in production and is guaranteed homogeneous.
